

NOAA's Airborne Snow and Soil Moisture Survey and The National Snow Analysis

Office of Water Prediction
Carrie Olheiser

SnowEx September 18, 2019

Mission

To support the National Weather Service's mission by producing the best estimate of snow water equivalent using all available data including satellite, airborne, and in-situ observations to protect life and property and the enhancement of the national economy.

Operational mission collecting SWE measurements since 1980.

Airborne Snow Survey Program

Jet Prop Commander Twin Otter

Operational Snow Survey Program

The National Operational Hydrologic Remote Sensing Center (NOHRSC) has developed, and currently maintains, an operational Airborne Gamma Radiation Snow Survey Program to make airborne Snow Water Equivalent (SWE) and soil moisture measurements. Airborne SWE measurements are used by NWS Weather Forecast Offices (WFO) and NWS River Forecast Centers (RFC) when issuing river and flood forecasts, water supply forecasts, and spring flood outlooks.

2017 - 2018 Snow Season Surveys

Name	Dates	Surveyed States and Provinces
North Central RFC	January 16, 2018	MT, ND, WI, MI
MBRFC	February 16, 2018	MT, WY, ND
Southern Canada	February 21, 2018	MB/SK
Red River Basin	February 28, 2018	ND/MN
Northeast	March 4, 2018	NY, PA, VT, NH, MA, ME
Southern Canada	March 7, 2018	MB/SK
Lake Superior	March 11, 2018	MI, IL, WI
Missouri River Basin	March 20, 2018	MT, WY, AB, ND
Sierra Nevada	March 26, 2018	CA
Northeast	March 28, 2018	NY, PA, VT, NH, MA, ME

.END

Lines in SE Montana flown today. The Milk river is partially open up to the town of Havre and then frozen with small patches of open areas headed east. In the Glasgow area, the snow cover becomes lighter. Beaver Creek is partially open. There are some flooded farm fields 4 miles south of Bowdoin. The Judith River appears open up to the Missouri River with heavy new snow in the area. The Missouri River is frozen from Fort Peck Lake but opens up where the Yellowstone River meets the Missouri.

NOHRSC Snow Model Physics

$$(K\downarrow - K\uparrow) + (L\downarrow - L\uparrow) + Q_e + Q_h + Q_g + Q_p = \Delta Q$$

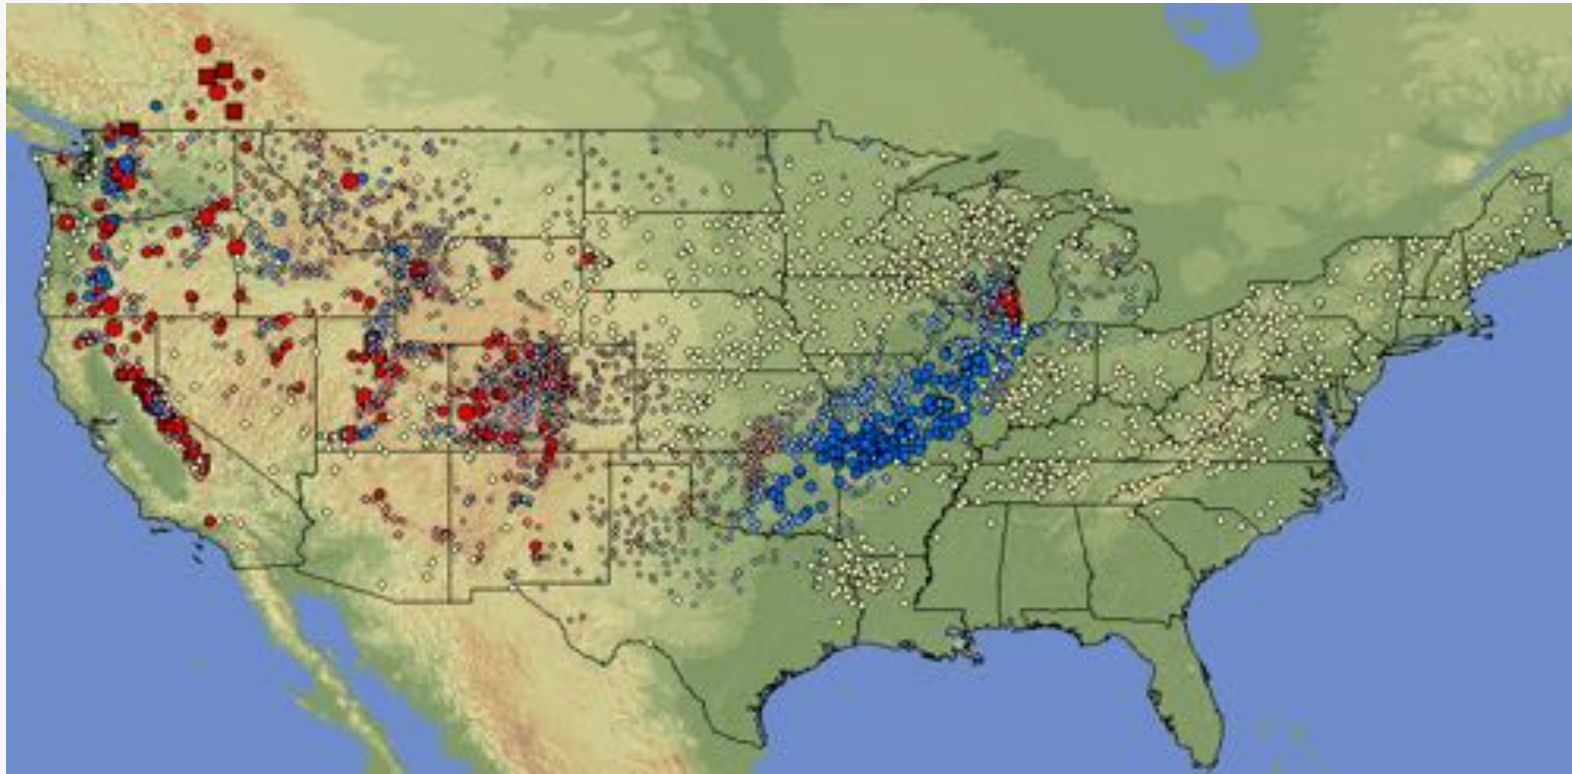

Snow Modeling Framework

Snow Observational Assimilation

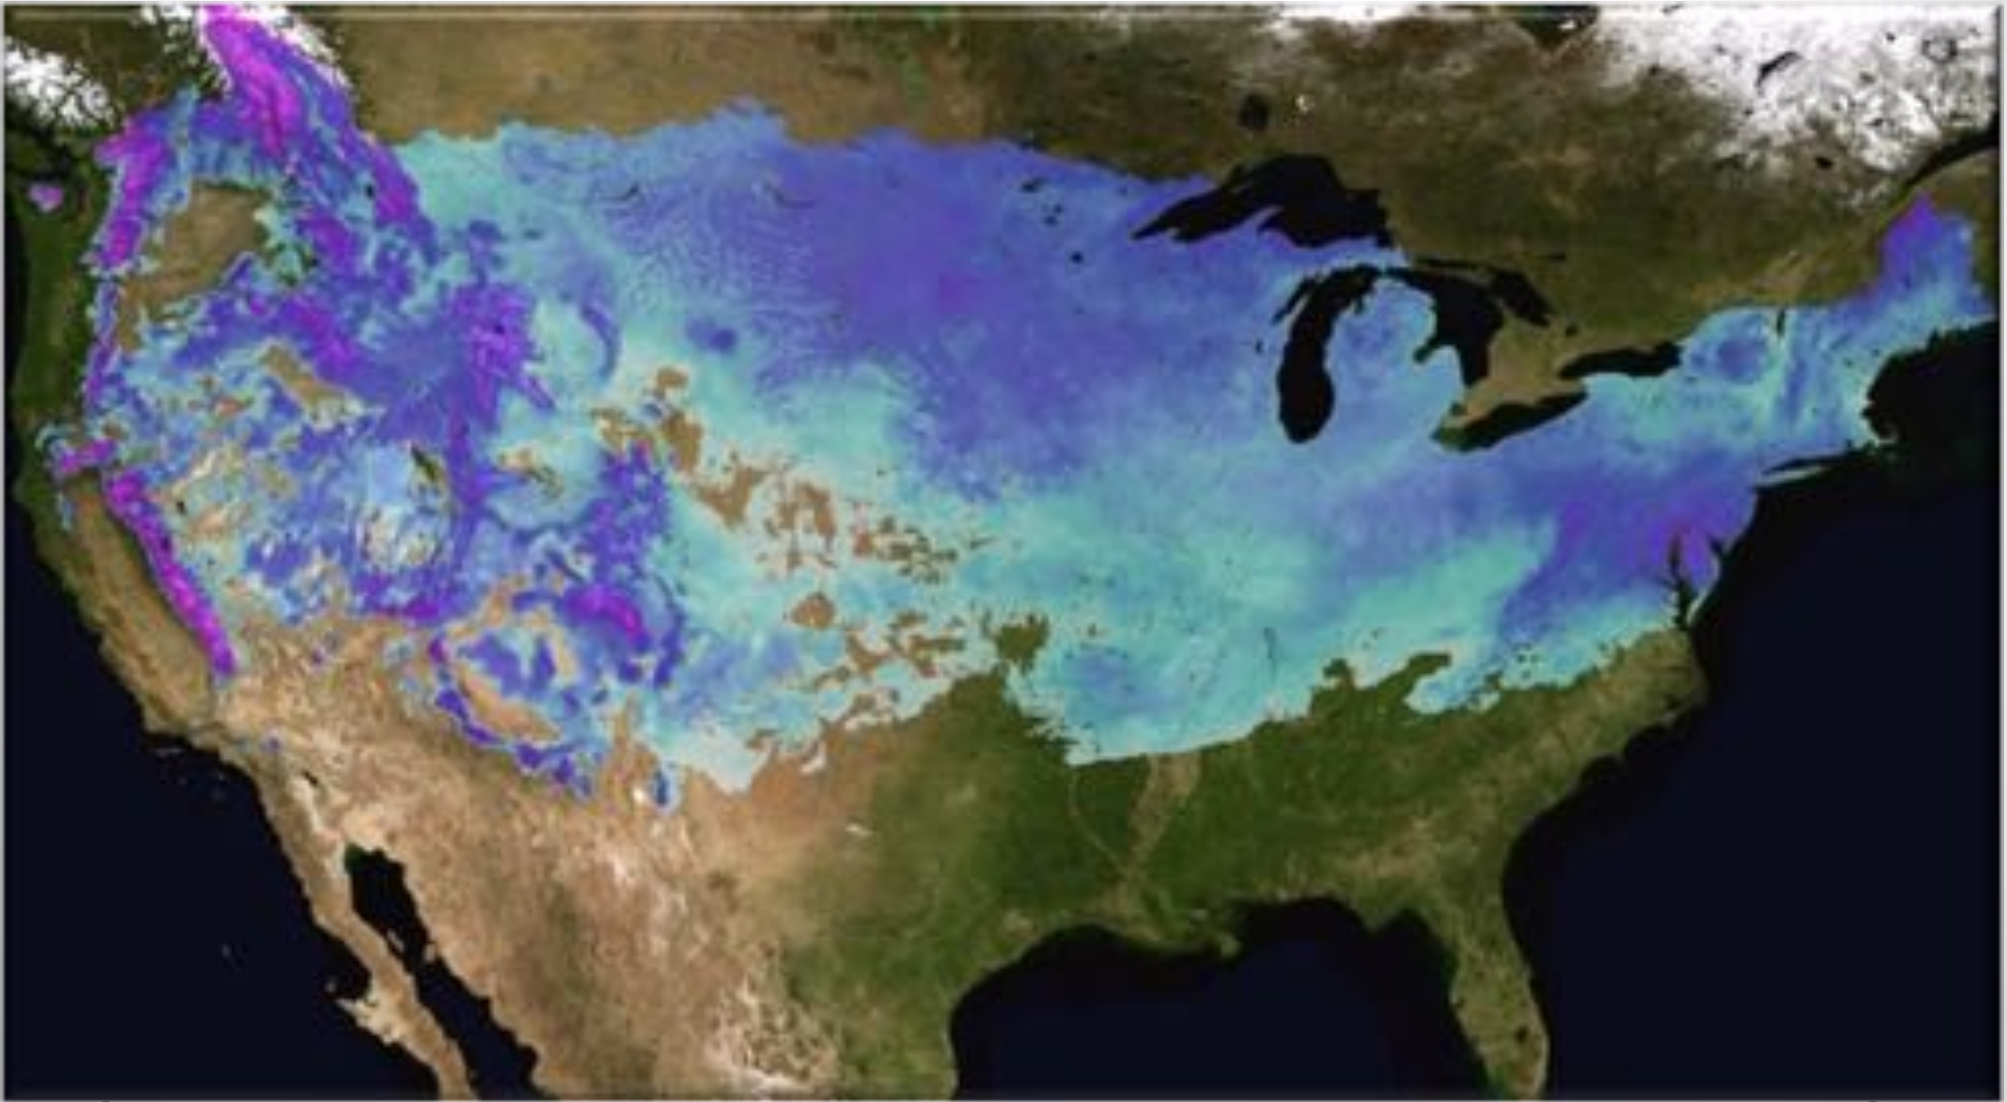

Daily SWE and Snow Depth Observations are used to update the model

If pattern of differences is explainable, an update field is generated and used to nudge the model toward observed states

- Uncertainties in driving data
 - Precipitation under/over estimation
 - Typing issue; rain/ snow
 - Placement of storm track
- Uncertainties due to model physics
 - Melt problems due to temperature bias
 - Sublimation rates

- Gridded observed snowfall images, seasonal totals, and data downloads in several formats can now be found on the [National Snowfall Analysis](#) page.

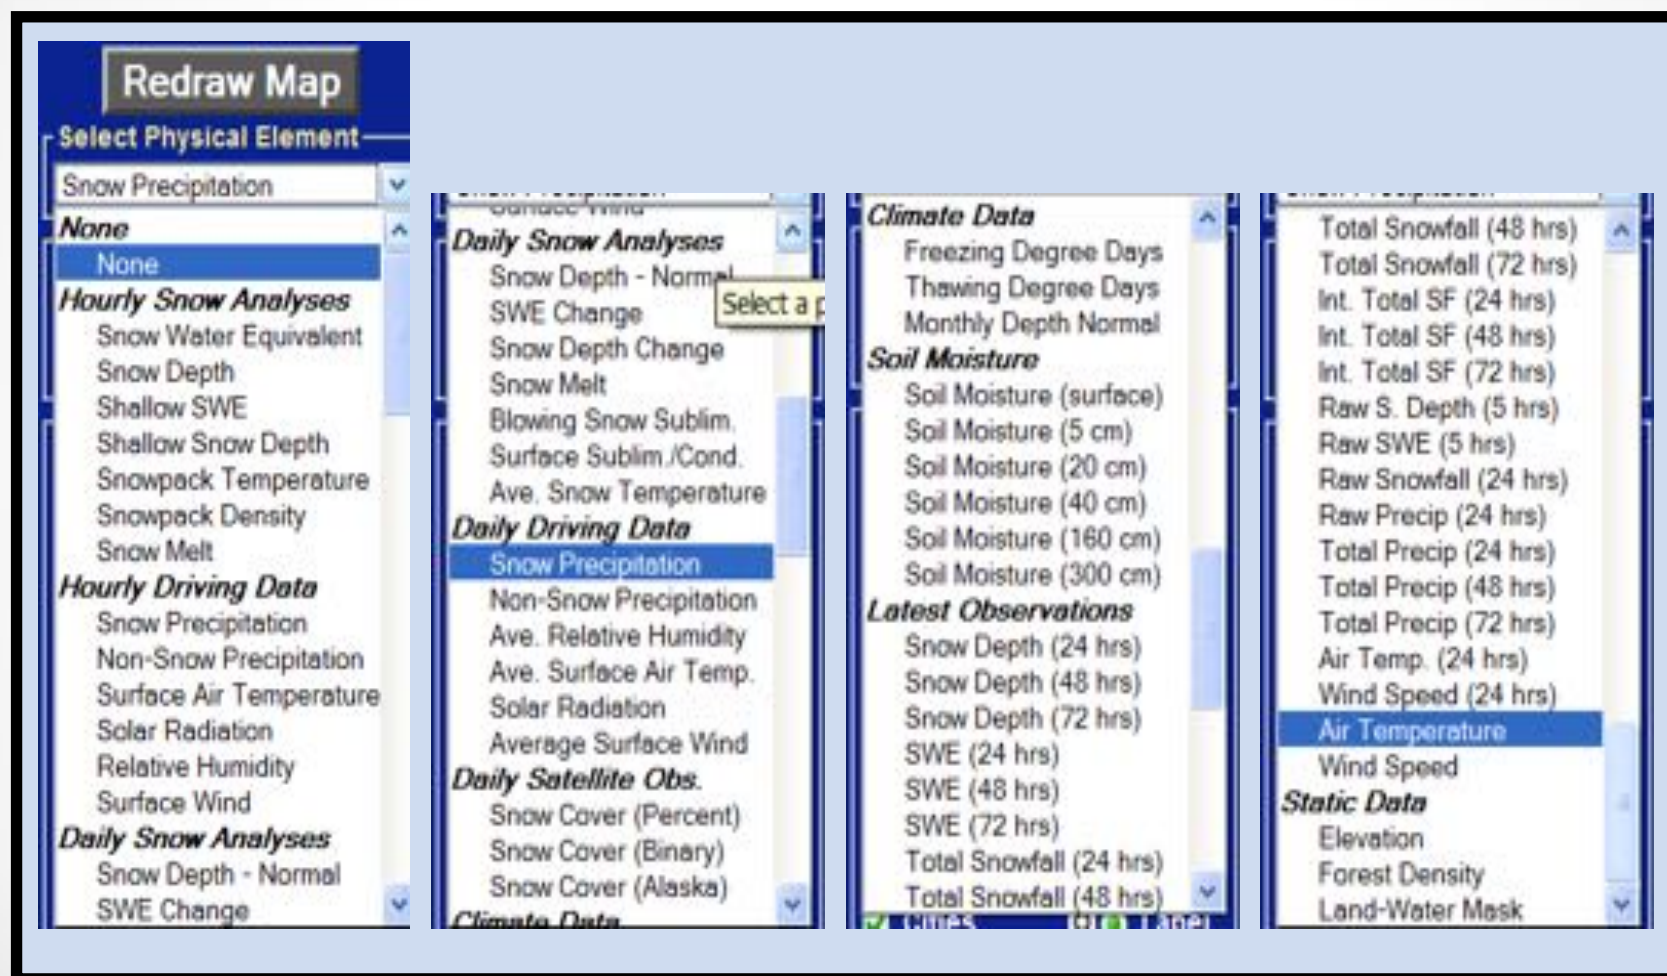

Directions:

- Select a physical element to view, select a date, select overlays, and click "Redraw Map."
- Clicking on the map while the Recenter button is selected (red) will recenter the map on that point.
- Clicking on the Zoom Control slider will zoom into or out of the map.
- Clicking on the map and dragging with the button held down while the Recenter button is selected (red) will zoom to a rectangle when the button is released.
- Stations and regions can be queried using the Query button and menu.

Economic Benefits of Snow

Winter tourism	Exceeds \$8 billion / yr	New England and Rocky Mountains
Cold water fishing (snow is cold water source)	Exceeds 2.3 billion / yr	New England
Snowpack water storage	Up to \$348 billion / yr	Western U.S.

"... improved snow information and services have potential benefits greater than \$1.3 billion annually."

Economic Costs of Snow

Snow removal	Exceeds \$2 billion / yr	U.S.
Road closures that cause lost retail trade, wages, and tax revenue	Exceeds \$10 billion / day	Eastern U.S.
Flight delays	\$3.2 billion / yr	U.S. carriers
Damage to utilities	Up to \$2 billion / event	
Flooding from snowmelt	\$4.3 billion	1997 U.S. floods

"... investments that make only modest improvements in snow information will have substantial economic payoffs."
